YUEJUN SHI

Mobile: (+1) 530-574-8816 ⋄ **Email**: peteryuejunshi@gmail.com ⋄ **Location**: Newark, CA

CORE EXPERTISE

- Fluid mechanics
- Computational fluid dynamics
- Turbulence modeling
- Boundary layer theory
- Aerodynamics
- Acoustics and noise control
- Aeroacoustics
- Numerical optimization

TECHNICAL SKILLS

CAD	CATIA, SolidWorks, AutoCAD
CFD	OpenFOAM, ANSYS Fluent, PowerFLOW, Nek5000
Mesh Generators	Pointwise, ANSYS ICEM
Flow Visualization	Tecplot, PowerVIZ, ParaView
Programming Languages	MATLAB, C/C++, Python, Shell script, Fortran, CUDA C
Others	Linux, Windows, Microsoft Office Suite

RELEVANT EXPERIENCES

Aeroacoustics Engineer July 2021 - Present
Lucid Motors, Newark, CA, U.S.A.

· Performing wind noise simulations for luxury electric vehicles
· Identifying opportunities for aeroacoustic improvement to achieve world-class quietness
· Carrying out wind tunnel experiments and road tests
· Working interactively and efficiently within a multidisciplinary team environment

PowerFLOW Solvers R&D Intern January 2021 - June 2021
Dassault Systémes Simulia Corp., Waltham, MA, U.S.A.

· Developed Python and shell scripts to automate the entire CFD workflow
· Verified and validating a multiphase flow code in PowerFLOW via benchmark cases
· Performed LBM simulations for various multiphase flow applications
· Reported to the manager on a daily basis and participating in team meetings.

Graduate Research Assistant September 2017 - June 2021
Department of Mechanical and Aerospace Engineering, University of California, Davis, CA, U.S.A.

· Validated an empirical wall pressure spectrum model
· Developed and validated a machine-learning-based wall pressure spectrum model
· Developed a theoretical model to predict airfoil trailing edge noise at the near-field
· Developed an efficient and accurate numerical approach to predict airfoil trailing edge noise using RANS
· Validated the WMLES solver in OpenFOAM and the IDDES model in ANSYS Fluent
· Proposed two novel trailing edge devices for the future's low-noise aircraft and quiet wind turbines
· Performed WMLES and IDDES simulations on a HPC for the new devices to compute their aerodynamic and aeroacoustic performances and investigate the underlying flow physics of noise reduction

Undergraduate Research Assistant November 2016 - June 2017
School of Aeronautics and Astronautics, Shanghai Jiao Tong University, Shanghai, China

- Validated various RANS models in OpenFOAM
- Automated grid generation and simulations using scripts
- Performed RANS simulations for multi-element airfoils using OpenFOAM
- Designed and optimized kinetic mechanisms for high-lift devices using responding surfaces and genetic algorithm
- Computer modeling and structural/dynamic analyses of the optimal kinetic mechanism

Undergraduate Research Assistant June 2015 - June 2017
Department of Aircraft Manufacturing Engineering, Hefei University of Technology, Hefei, China

- Designed and tested a high-lift airfoil using CFD, genetic algorithm, and a low-speed wind tunnel
- Developed a 2-D FVM-based CFD code using the Roe scheme and multi-stage Runge-Kutta method in C++
- Implemented the multigrid method to speed up the code
- Further accelerated the code using GPUs based on the CUDA platform

EDUCATION

Ph.D. in Aerospace Engineering (GPA: 3.85/4.00) September 2017 - June 2021
University of California, Davis, CA, U.S.A.
Dissertation: Multi-fidelity Computational Fluid Dynamics Simulations of Novel Trailing-edge Devices for Airfoil Self-noise Reduction

M.S. in Aerospace Engineering (GPA: 3.85/4.00) September 2017 - June 2019
University of California, Davis, CA, U.S.A.
Thesis: Airfoil Trailing Edge Noise Prediction Using RANS CFD

B.E. in Aircraft Manufacturing Engineering (GPA: 3.75/4.00) September 2013 - June 2017
Hefei University of Technology, Hefei, China
Thesis: Design of a Kinematic Mechanism for Trailing Edge Flaps
